

**Pharmacy e-Health Information  
Technology Collaborative**

# Overview

# Collaborative Members

## Founding Organizations

- 9 Professional Pharmacy Associations
- Represents over 250K members in all practice settings

## Members

- AACP-ACCP-ACPE-AMCP-APhA-ASCP-ASHP-NASPA-NCPA

# Education and Outreach

## Inside

- Pharmacists-Faculty-Students-Pharmacy Staff

## Ancillary

- Providers-vendors-networks-payers
- Researchers

## Outside

- Policymakers-healthcare providers
- Patients-consumer organizations

# Collaborative's HIT Focus

## Facilitate Quality of Care

- Facilitate the provision and enhance the quality of patient care services provided by pharmacists

## Address HIT Needs

- Address the profession's HIT needs and functionality to provide, document and bill for pharmacist-provided patient care services in all care settings.

## Influence Policy

- Influence HIT policy through unified, consistent communications to the Office of the National Coordinator for Health Information Technology (ONC) and other HIT organizations about pharmacist-provided patient care services and pharmacists' contributions to the ONC defined meaningful use (MU) of EHR

## Ensure Resources are Aligned

- Ensure that resources, technical standards, and provider knowledge are aligned with the nation's growing need for pharmacists' services

# Objectives

## PP-EHR & MTM

- Through the consensus work of expert panelists define the minimum data set and functional Pharmacist/Pharmacy Provider electronic health record (PP-EHR) capabilities. Facilitate actions to entrench the PP-EHR into the national HIT initiatives in order to deliver, document, and bill services provided by pharmacists in all patient care settings through the meaningful use of HIT

## Roadmap

- Form a structured group consisting of organizations and individuals interested in creating a consensus-based Roadmap. Disseminate the Roadmap to policymakers and the healthcare industry. The Roadmap should ensure medication related technology is meaningfully used in an efficient and effective manner for pharmacists to affect improved medication use

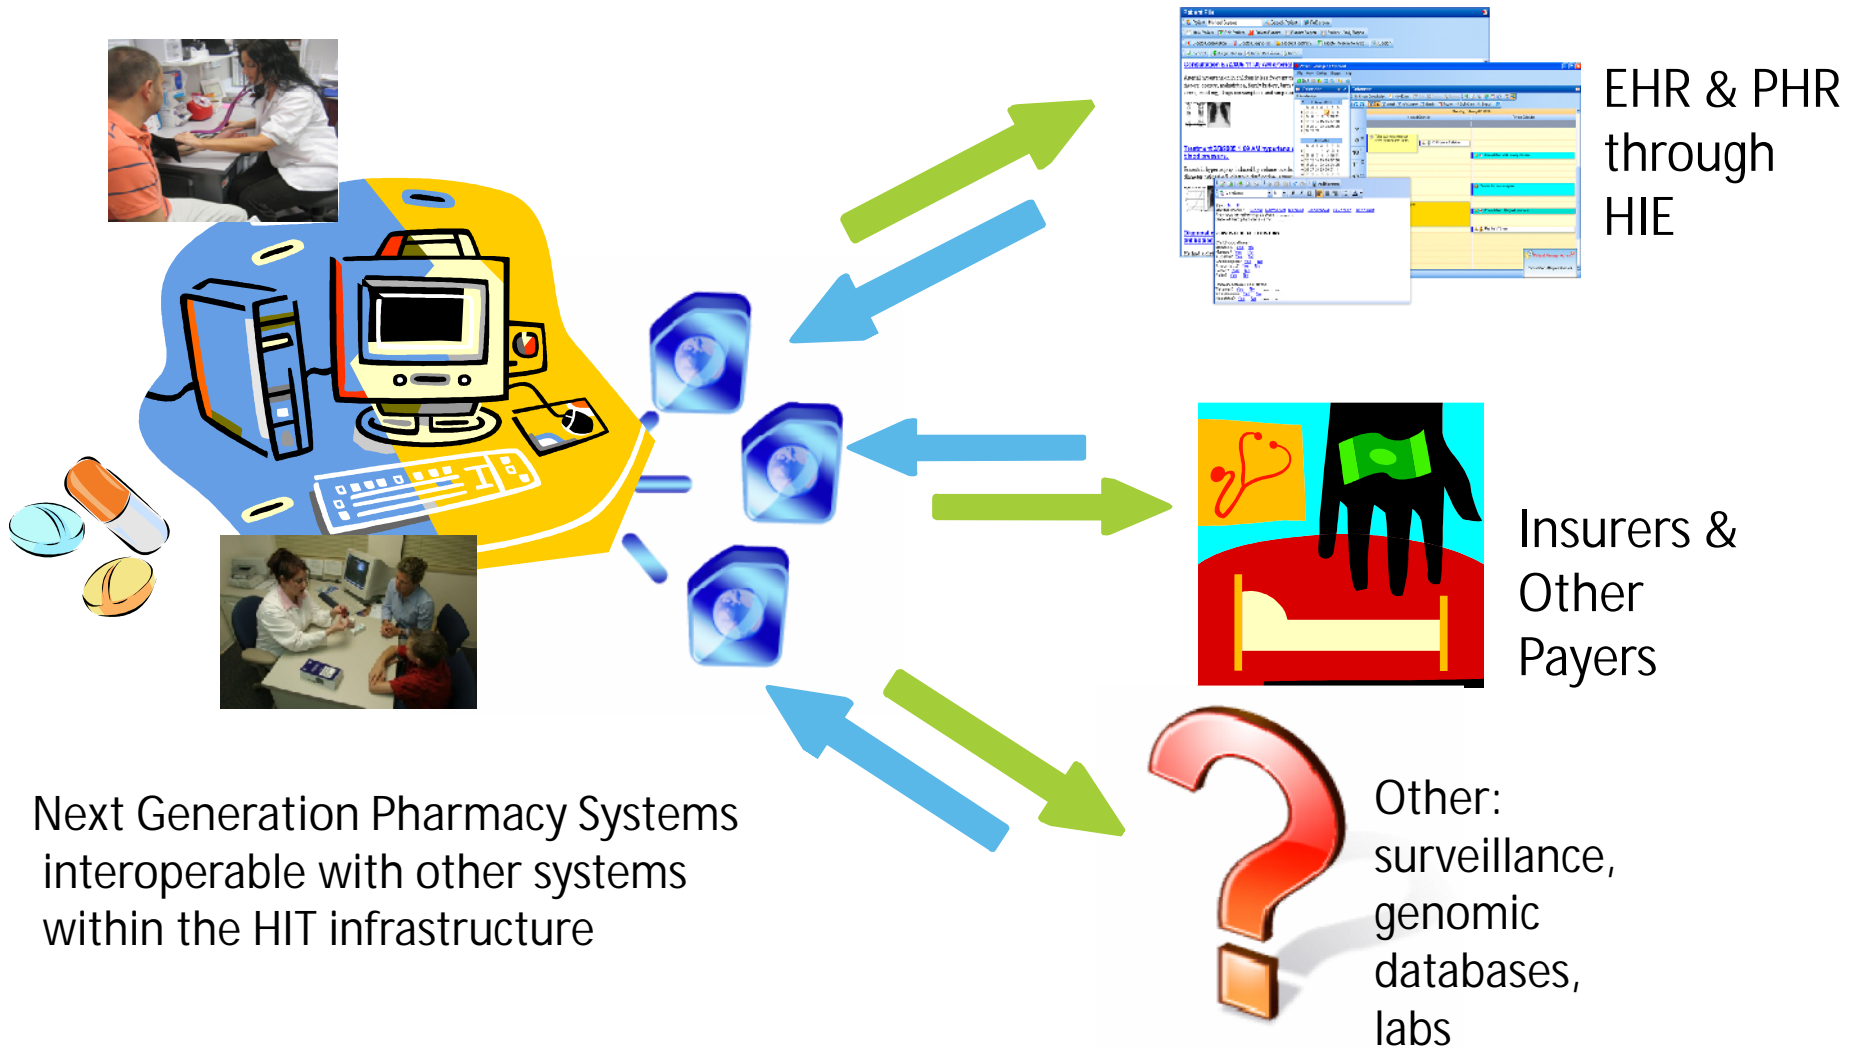

## Certification

- Ensure the PP-EHR becomes a model through the technology standards development organizational process; criteria for certification are defined; and becomes certified and adopted by the pharmacy community

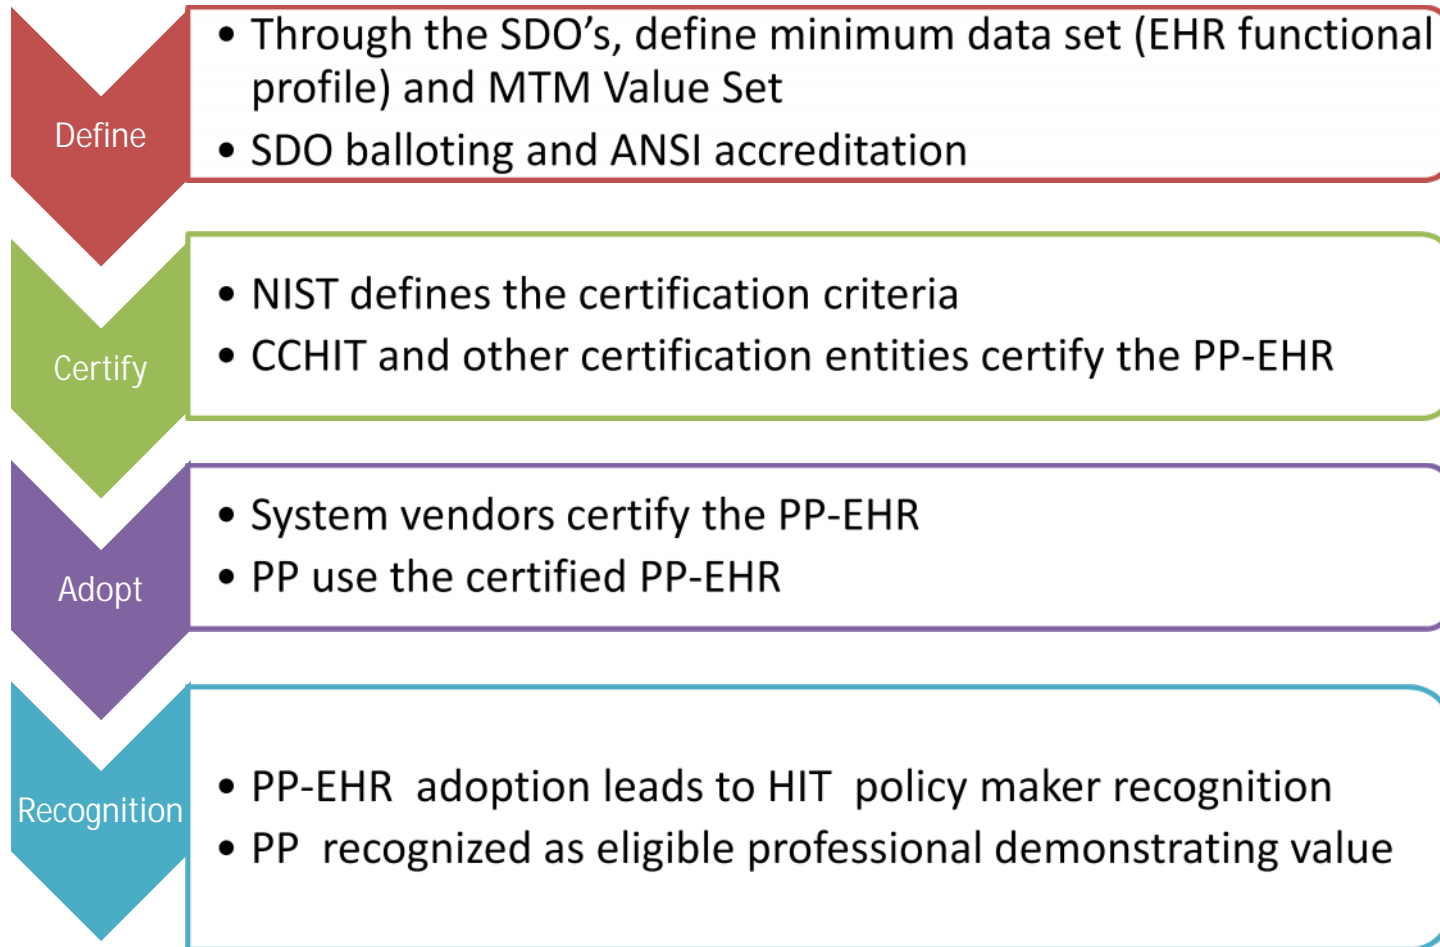

## One Voice

- Facilitate a unified voice of pharmacy representation on key HIT-related committees and workgroups to influence the recognition of pharmacists and the services they provide. As pharmacy practitioners are more engaged with HIT policymakers, the influence of other health professionals defining HIT platforms that impact pharmacy HIT will be lessened

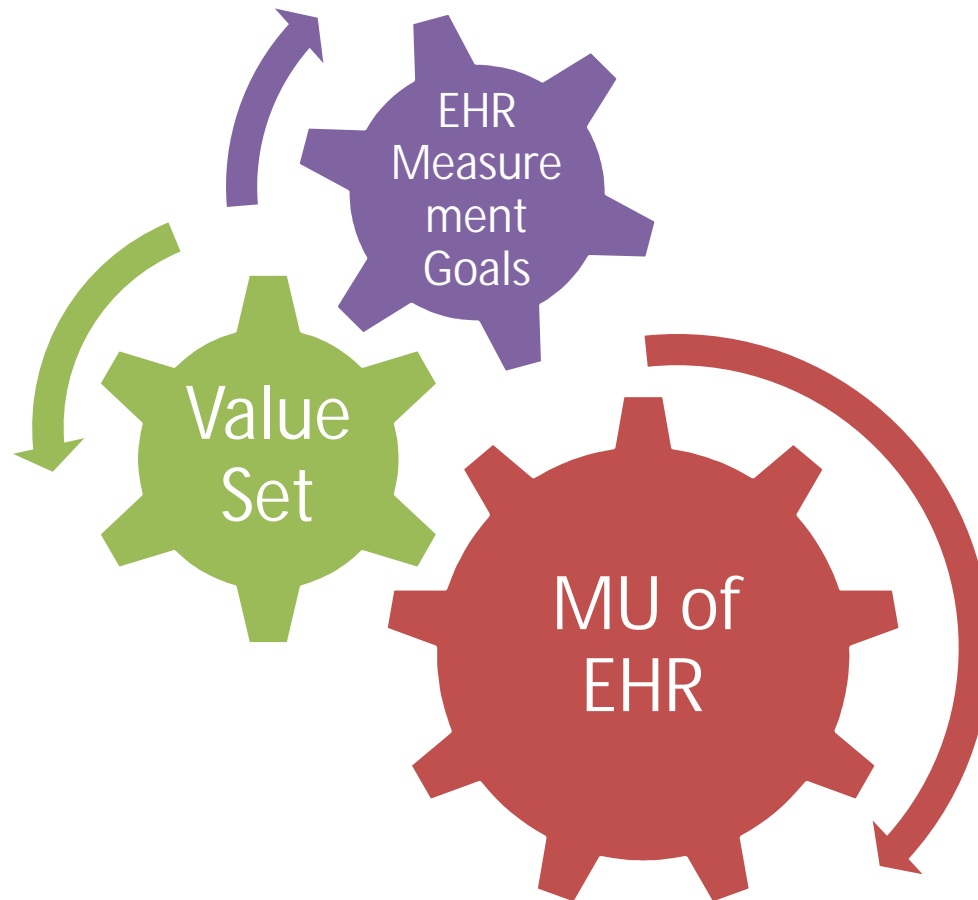

# Future Pharmacy HIT Environment

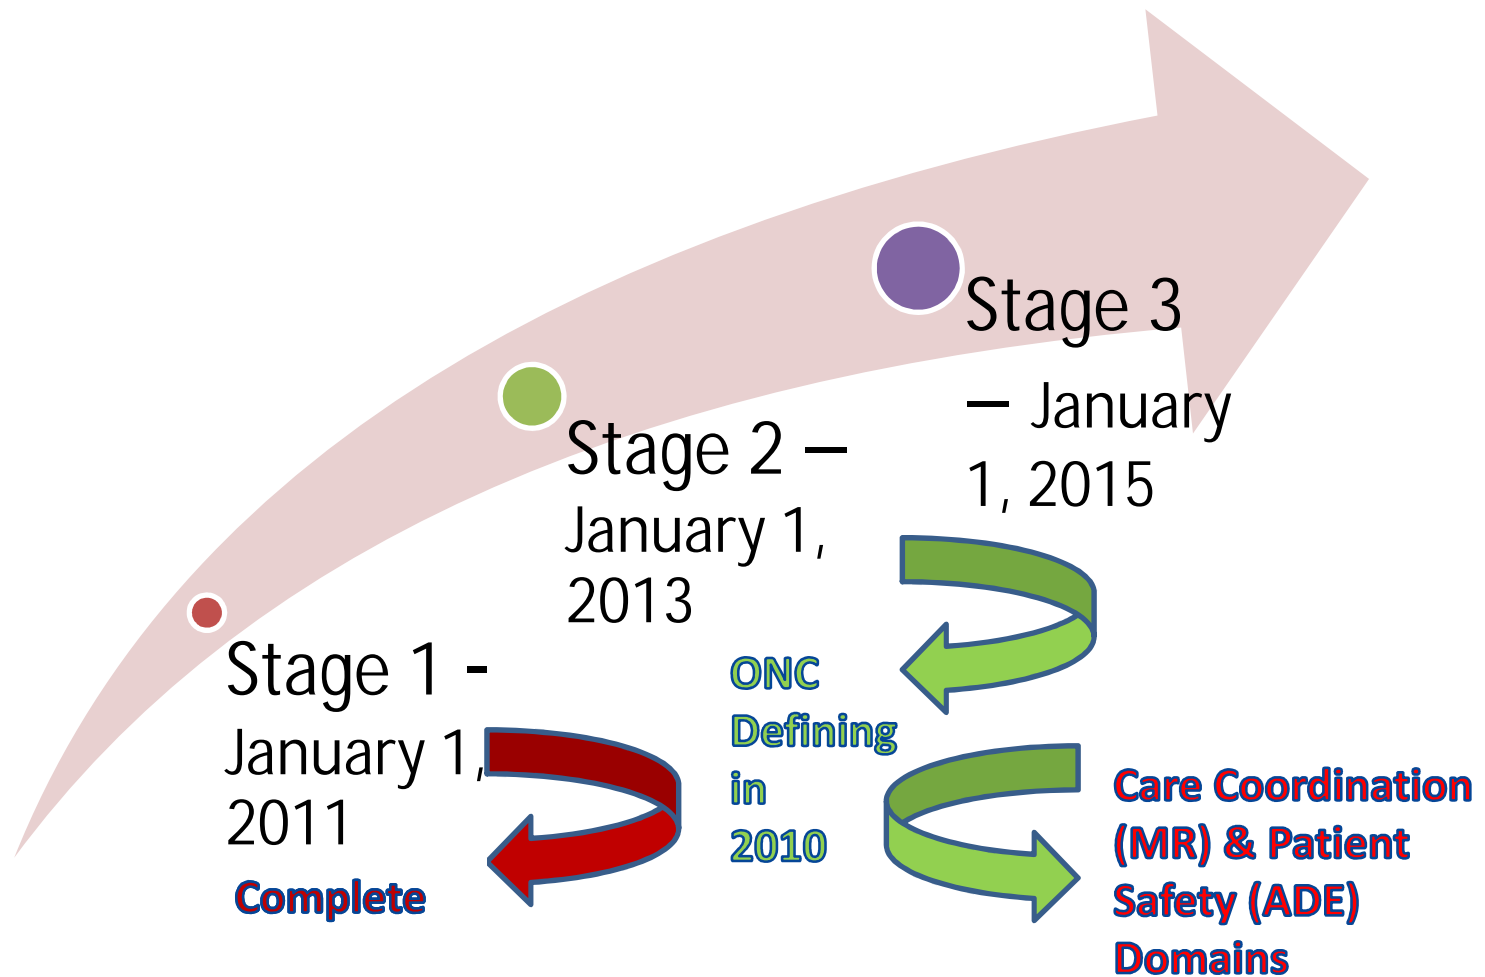

# Pharmacist/Pharmacy Provider EHR (PP-EHR) Process

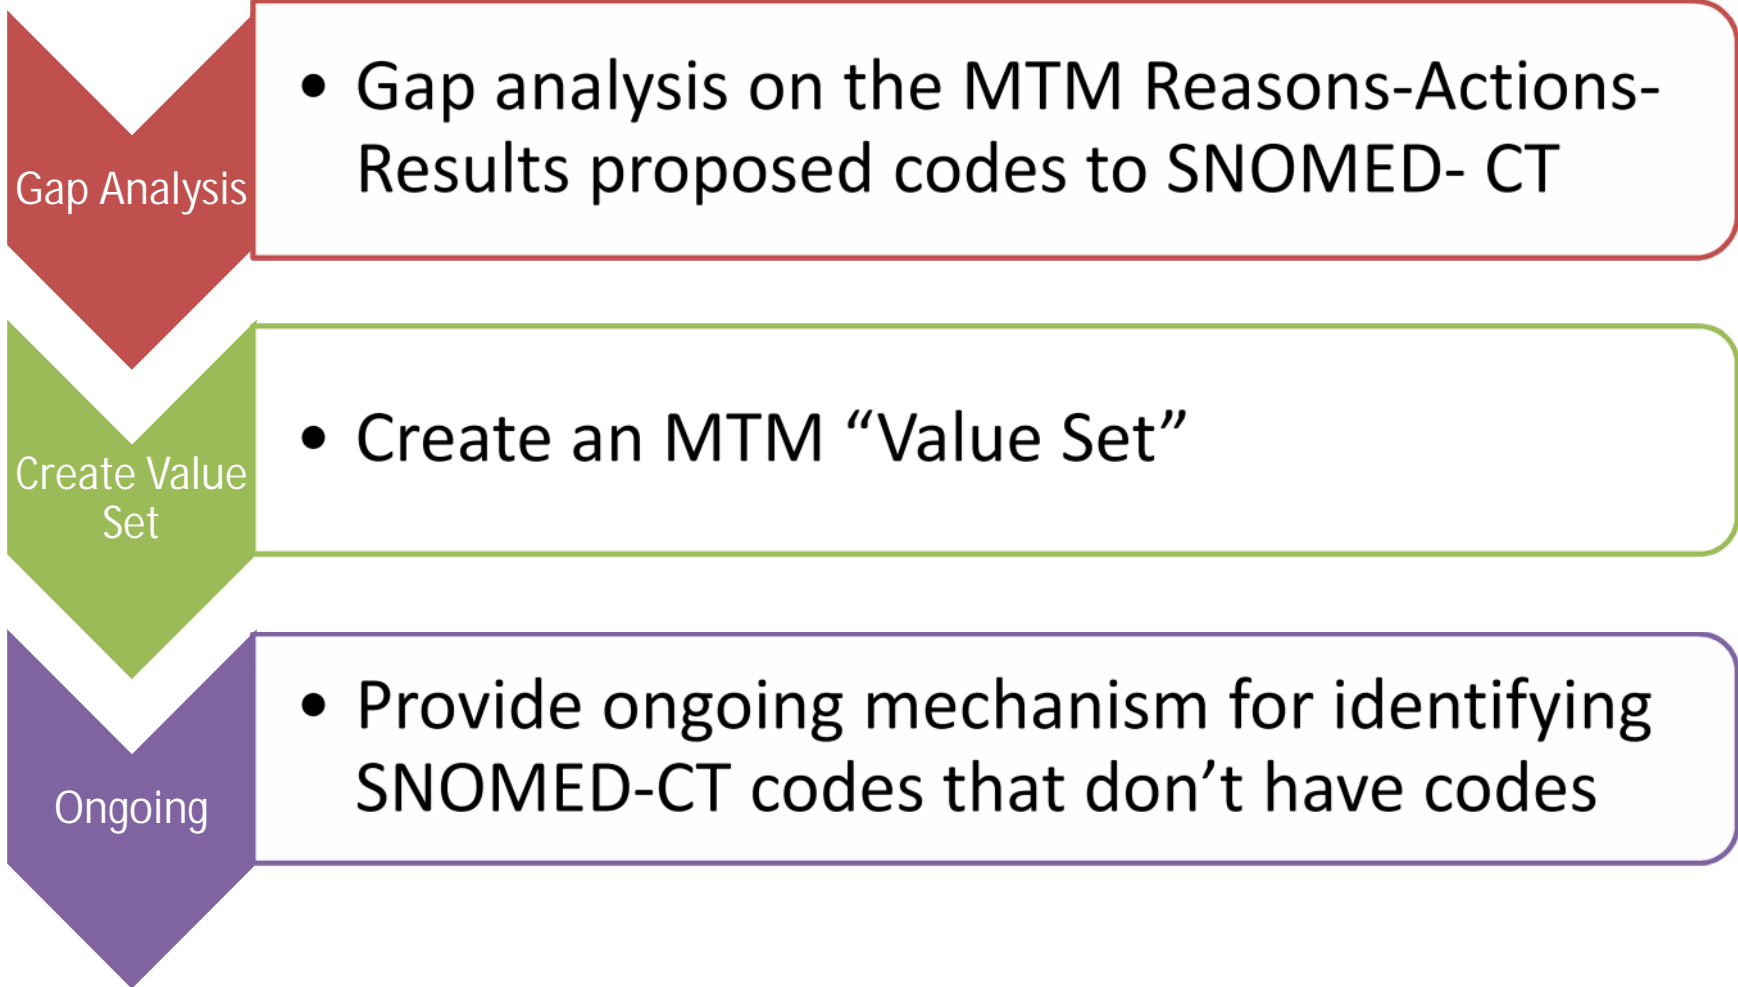

# CMS/ONC Defined MU of EHR

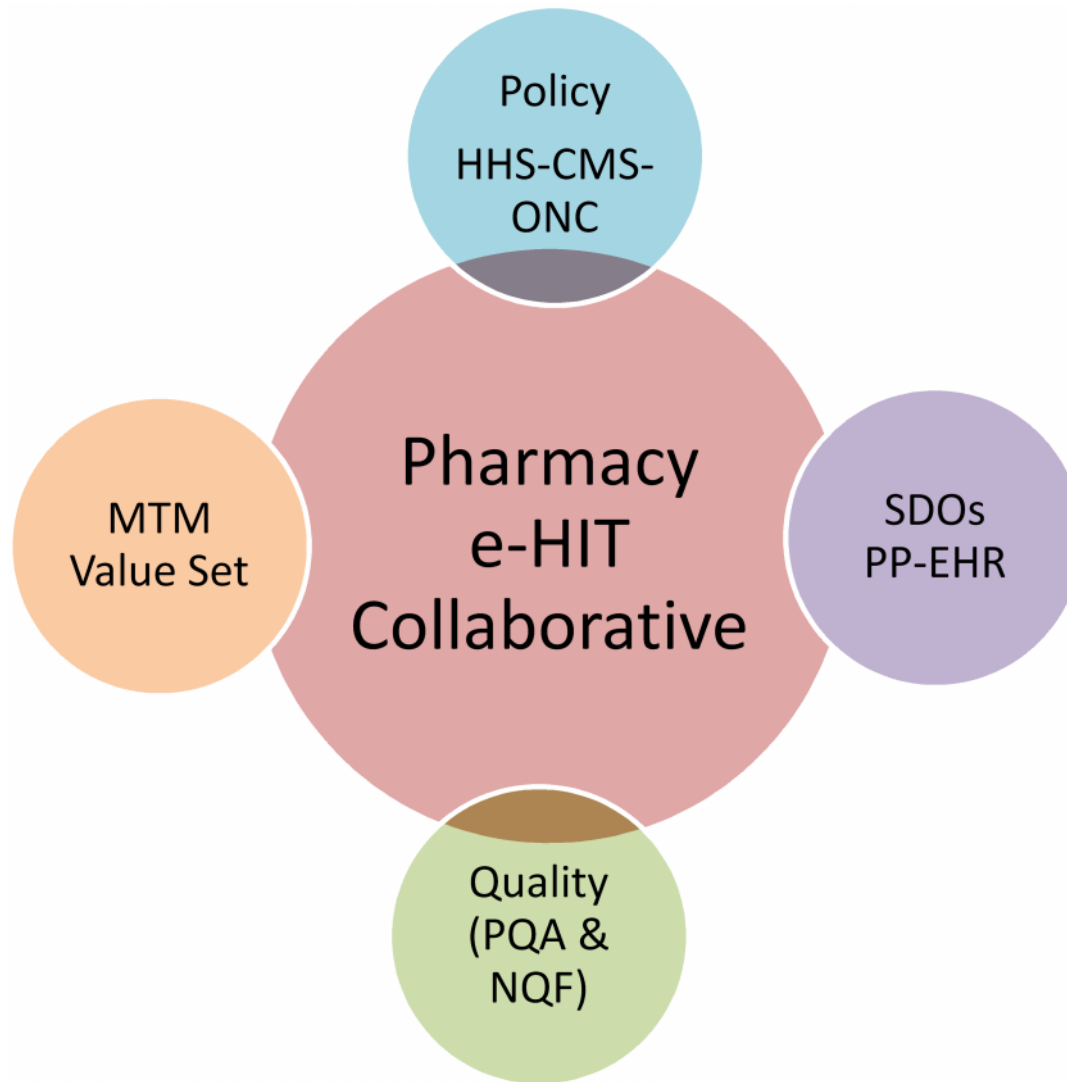

# CMS/ONC Defined MU of EHR Measurement Goals for EP Incentives

# Value Set Process
